November 16, 2022

Dear Speaker Pelosi and Leaders McCarthy, Schumer and McConnell:

On behalf of the undersigned organizations representing health care providers, public health professionals, scientists, patients, and the pharmaceutical and diagnostics industries, we write to urge you to enact the PASTEUR Act in an end of year package to address the growing crisis of antimicrobial resistance (AMR) by strengthening the antimicrobial pipeline to ensure clinicians have the innovative products they need to treat patients, and ensuring antimicrobials are used appropriately. Every day we wait to address the crisis in the antimicrobial ecosystem is another year patients and providers must wait to have access to life saving medicines.

In 2019, an estimated 1.27 million deaths worldwide were directly caused by AMR, and AMR played a part in nearly 5 million deaths. This makes AMR a leading cause of death globally. It is also clear that the COVID-19 pandemic exacerbated AMR. In 2020, the U.S. experienced a 15% increase in AMR infections and deaths due to COVID-19, and experts do not expect a return to pre-pandemic levels without concerted action. Because antimicrobials enable modern medicine, growing rates of resistance and a shrinking arsenal of products jeopardize our ability to safely provide organ transplants, cancer chemotherapy and surgeries such as hip and knee replacements and cesarean sections. Additionally, AMR is a significant economic burden here in the U.S.; the direct healthcare costs of treating only six of the most threatening multidrug-resistant pathogens is estimated to be \$4.6 billion per year<sup>3</sup>.

Despite the urgent and increasing need for novel antimicrobials to treat superbugs, the antimicrobial ecosystem is broken and unable to meet patient needs. The current pipeline has only 43 antibacterial therapeutics in clinical development worldwide – only 19 of which are for the most threatening gramnegative pathogens – a critical area of unmet need.<sup>4</sup> We know that the pipeline is already inadequate to address current resistant threats, let alone those that will come in the future. This reinforces the need to urgently stimulate investment in novel antimicrobials to quickly bolster the pipeline.

Novel antimicrobials must be used judiciously to limit the development of resistance, so payment based on volume fails to drive innovation. PASTEUR's subscription model is an innovative way to pay for novel antimicrobials that will revitalize the pipeline and support appropriate use. Under PASTEUR, the federal government can enter into contracts with innovators to pay for a reliable supply of novel antimicrobials with payments that are decoupled from the volume of antimicrobials used. Importantly, the federal government only pays once – the subscription payment is all-inclusive, and PASTEUR only pays for success. Furthermore, PASTEUR will only pay for FDA approved treatments that are available to patients and meet unmet AMR needs— those that will have a big impact for patients and public health.

The delinked approach is similar to Project Bioshield, which provides multi-year funding to support procurement of medical countermeasures (MCM) for national security. Antimicrobials, like MCM, have a very limited commercial market. PASTEUR will provide novel antimicrobial innovators with a more predictable return on investment necessary to revitalize the antimicrobial pipeline—just like Project Bioshield has done for MCMs.

PASTEUR would also provide new funding for rural, critical access and safety net hospitals to support antimicrobial stewardship, to ensure that antimicrobials are used appropriately to limit the development of resistance, and to ensure that the vulnerable patients served by these hospitals can have access to the benefits of antimicrobial stewardship.

In his September 2022 remarks to the World AMR Congress, Secretary Becerra reiterated the Administration's commitment to this issue, as evidenced by the inclusion of a proposal that aligns with PASTEUR in the President's budget request for 2023, which was endorsed in the Senate released Labor-Health and Human Services appropriations bill for 2023. PASTEUR has over 60 bipartisan cosponsors and the broad support of a diverse array of stakeholders. Delays in the passage of PASTEUR are delays in the development of novel antimicrobials to treat highly resistant, life-threatening infections—delays that many patients, including those particularly susceptible to infections, such as patients with cystic fibrosis, cancer, or organ transplants, cannot afford.

We urge you to enact PASTEUR in an end of year package in 2022.

Thank you,

Organization (as it will read on the letter)
