Disease Prevalence Projections, 2015-2050

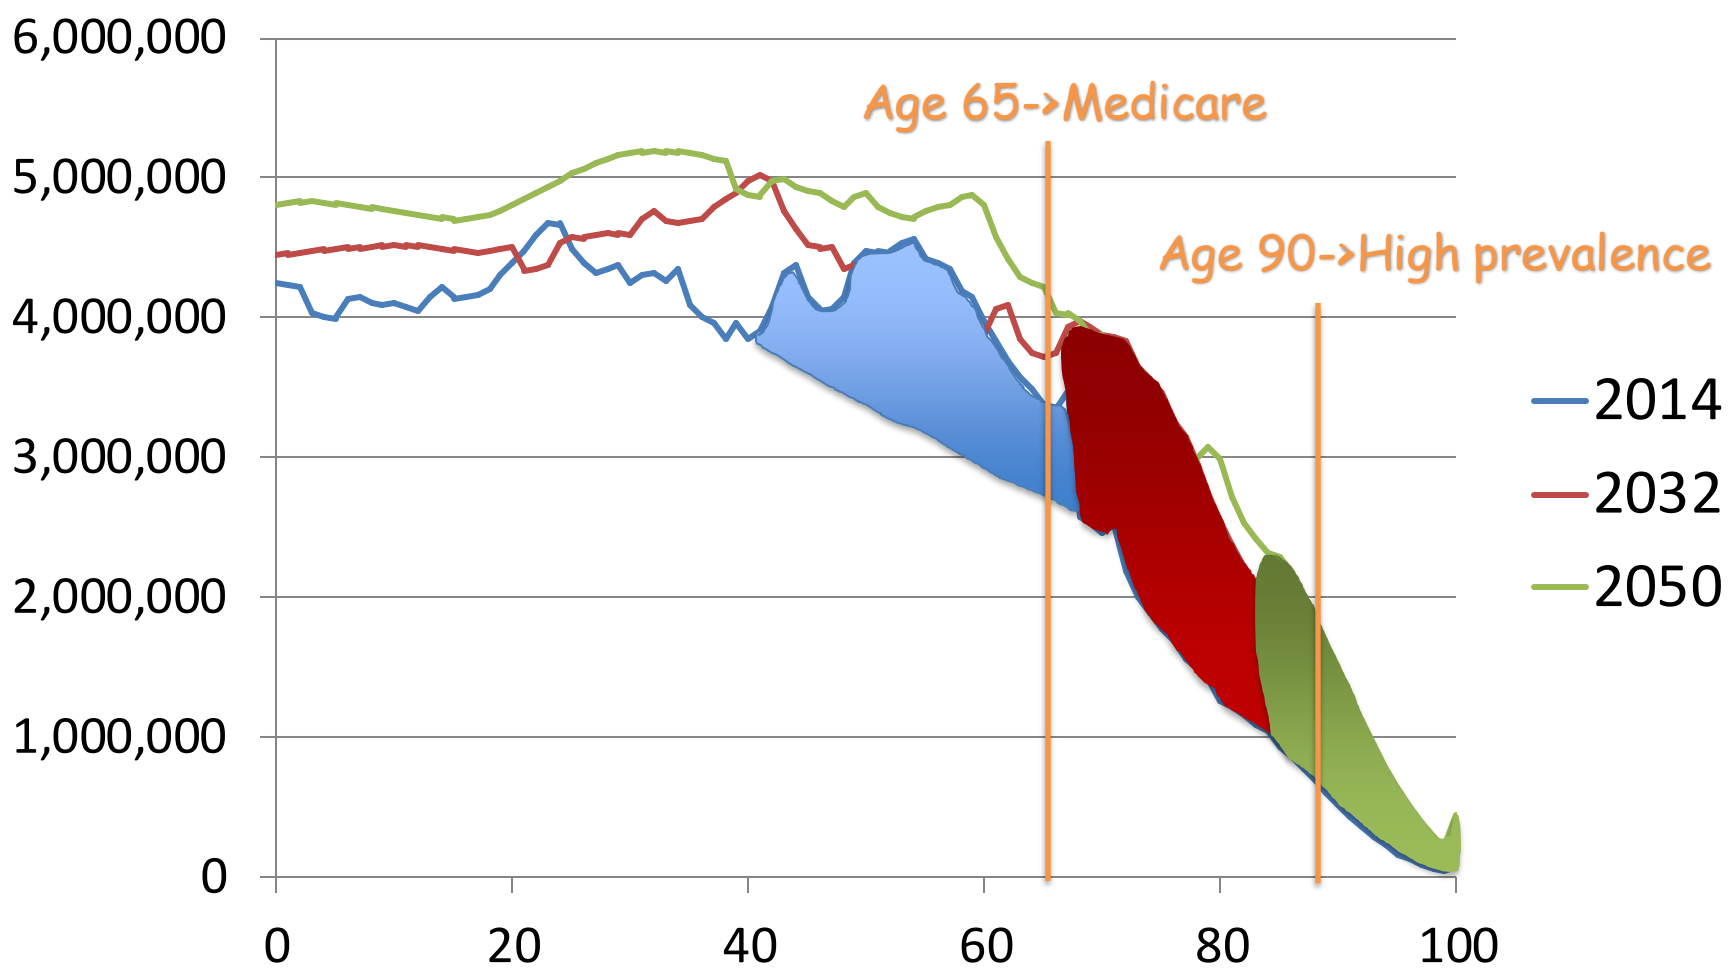

Projected Total Costs, Real versus Nominal Costs, \$billions

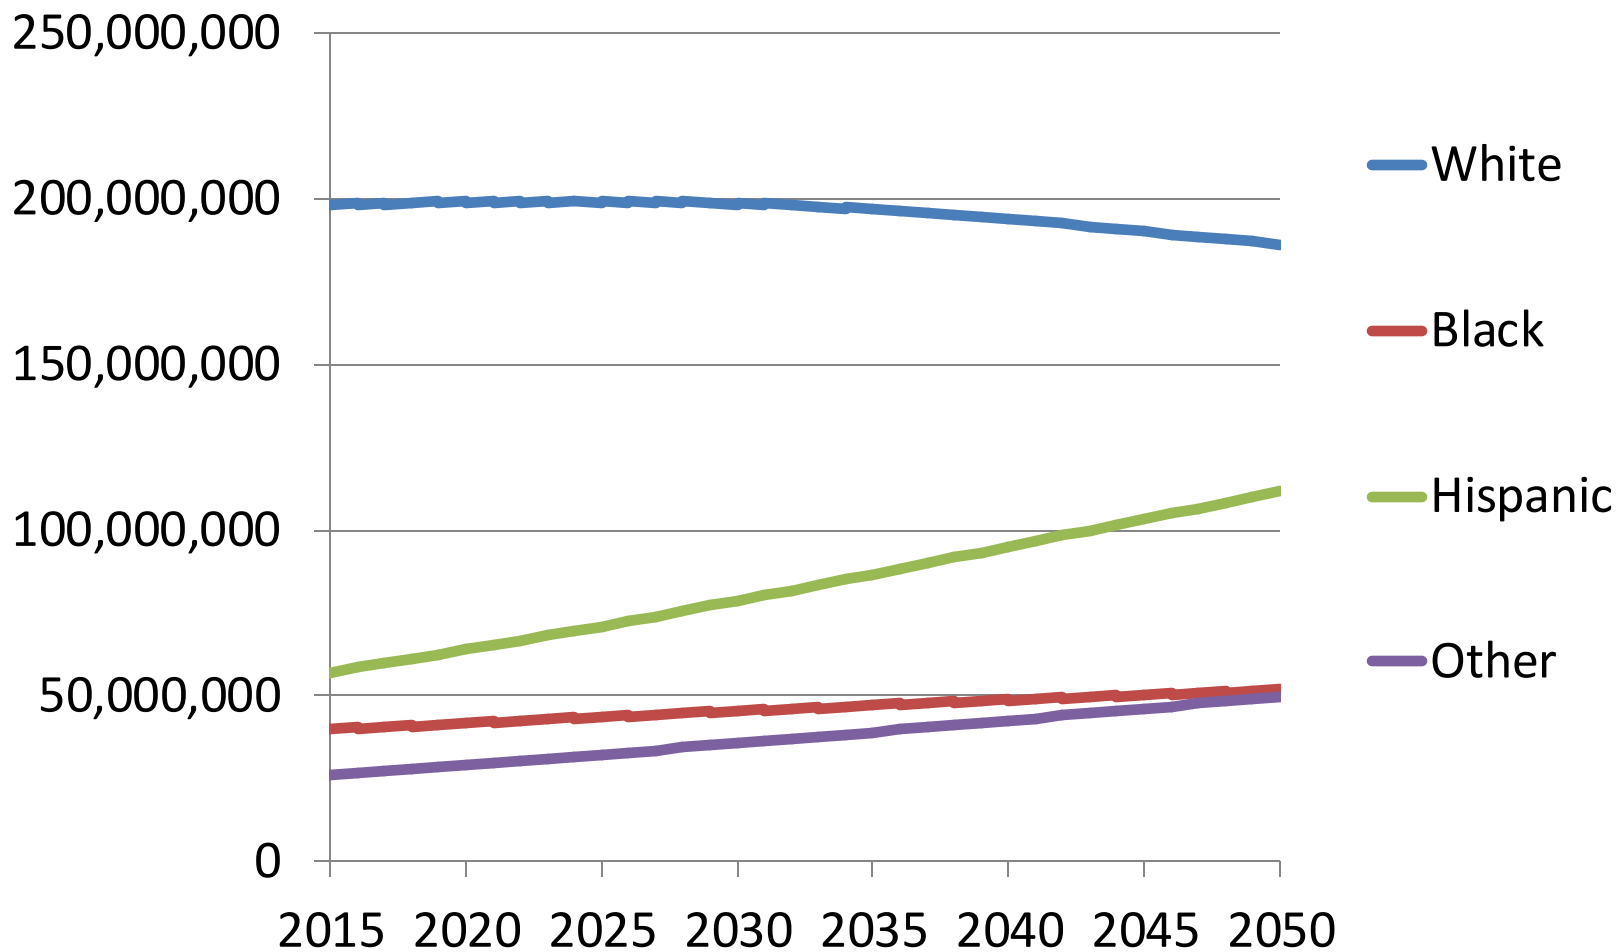

Population Projections – by age

Population Projections – by race

Key Findings

- Prevalence and costs will shift to conditions that are
 - More prevalent at older ages
 - More common among minorities
- The baby-boomer effect will dramatically increase prevalence and costs
- The 90+ population will see the highest rates of growth in prevalence and costs by 2050

What now??

Can Public Policy Curb the Growing Impact of Vision Problems?
